1 - Quoted talk and standby times with 2 AAA 600 mAh NiMH batteries

2 - The quoted range is under ideal conditions, i.e. with no obstacles between the base and handset.

The range of DECT cordless telephones depend on :

- the environment in which the base station is located : thick walls, metallic window frames ect near the base will reduce the phone's range
- the presence of obstacles between the base station and handset : for example, when using a handset in the garden with the base station inside the house, the range may be reduced by the exterior wall of the house.
